## Fiber Analysis

Scenario: The team of investigators have found a fiber sample from the scene of the heist. They want to know what material it matches.

Materials:

- Microscope
- Sample #1 : \_\_\_\_\_
- Sample #2: \_\_\_\_\_
- Sample #3: \_\_\_\_\_
- Sample #4: \_\_\_\_\_
- Sample #5: \_\_\_\_\_
- Mystery Sample

Procedure:

- 1.) Set up Microscope
- 2.) Prepare slides of different fiber samples.
- 3.) Analyze each fiber sample - draw, label and use adjectives to describe each sample.
- 4.) Analyze the mystery fiber sample.
- 5.) Compare and contrast the mystery fiber sample to the other samples.

Data Collection:

Discussion:

- 1.) Compare and contrast the natural materials (cotton, jupe, wool) with the synthetic materials (nylon and polypropylene). How are they similar, how are they different?
  
  
  
  
  
  
  
  
  
  
- 2.) Based on your evidence, what kind of material do you think the mystery sample is? Use specific evidence in your answer.
  
  
  
  
  
  
  
  
  
  
- 3.) What else could we do with the fibers to compare and contrast them? What other experiments could we create to find differences between the different types of fiber materials?
  
  
  
  
  
  
  
  
  
  
- 4.) Conclusion - what did you do and what did you learn?
